HOW TO KILL A TANK

THE LOOP

After each throw (hit or miss):

- If the tank still has boxes left, you start over. Build another bottle. The night isn't over.
- If you win, you can play again. There's always another tank.
- If you're caught, pass this page to someone else. The fire spreads.

SOLO PLAY

You against the tank. Keep going until you win or die. After each game, remember one thing you learned. Next game, you start with that knowledge.

WHAT YOU LEARNED

After playing, you should be able to answer:

- Why are beer bottles bad for Molotov cocktails?
- Why won't diesel work?
- What does thickener do?
- Where did storm matches come from?
- Where do you aim against a vehicle?

If you can answer these, the game worked.

PASS IT ON

Photocopy this page. Fold it. Staple it. Leave it somewhere. The bottle remembers what the tank forgets.

How to Kill a Tank is an anti-capitalist game for free distribution. No rights reserved. Burn it, copy it, throw it. 2084.

THICKENER	DICE OUTCOME	EFFECT
Styrofoam	You reached 4	+2 EFFECT
Motor oil or Tar	You reached 3	+1 EFFECT
Sugar	You reached 5	+1 EFFECT

YOUR BOTTLE IS READY

Add up your **EFFECT** bonuses from:

- Liquor bottle (+1)
- Chemical wick (+1)
- Thickener (+1 or +2)

Total EFFECT: _____

THE THROW

You are at the edge of the riot. The tank is 30 meters away.

Real knowledge: Aim at the ground in front of the target, not at the tank itself. The splash creates aerosol that ignites. Tanks are most vulnerable at the rear deck (engine air intakes).

Choose your aim

- Body of the tank
- Ground in front
- Rear deck (-1 on your roll value)

Roll to throw. Roll 1d6 and add your total EFFECT.

ROLL + EFFECT	RESULT
4 or higher	HIT! Mark one box on the
3 or lower	MISS. Dud. Lose 1 Safety.

TANK HIT TRACKER

If the tank has 2 hits: YOU WIN. Describe it burning. The crowd roars. For a moment, the fire is enough.

If Safety = 0 or Visibility = 3: YOU ARE CAUGHT. Game over.

You are one person. The year is 2084. The billionaires have retreated to their orbital arks. The Peace Force patrols the streets below. A tank is coming. You have 10 minutes and one bottle. This game teaches you how to make a Molotov cocktail. The choices you make matter. The things you learn are real.

You will need:

- 3x six-sided dice (d6)
- 1x pen

SETUP

Your name: _____

Your tool (circle one):

- GLOVES:** You can take one extra risk without losing Safety (once).
- FRIEND:** Someone has your back. Once per game, reroll one failure.
- EXPERIENCE:** You've done this before. Start with 4 Safety instead of 3.
- DESPERATION:** You don't care what happens. Start with 1 extra Visibility, but you can add +1 to any one roll.

SAFETY				(start with 3)
VISIBILITY				(start with 4)

SAFETY is how careful you are. If it reaches 0, you catch fire, inhale fumes, or are caught. Game over.
VISIBILITY is how much attention you draw. If it reaches 3, the Peace Force spots you. Game over.

THE TANK NEEDS 2 HITS

Some tanks need more. Some need less. This one needs two good hits. You have to survive long enough to make them both.

HOW TO PLAY

You will build a Molotov cocktail in 4 steps. In the end you may also choose to add a thickener. Then you throw.

On each step: Roll a six-sided die (d6).

RESULT
SUCCESS. Apply the effect and move to the next step.
FAILURE. Lose 1 Safety. Try that step again.

If you ever run out of Safety or max out Visibility, you are caught. Game ends.

STEP 1: THE BOTTLE

You find three bottles: a beer bottle, a wine bottle, and a large liquor bottle (1.75L).

Task: Roll all 3 dice. Do not change the dice after you rolled. Next you need to stack them on top of each other to create a tower (= bottle). At least one side needs to form a row of numbers from big (at the bottom) to small (at the top).
Example A: After stacking all 3 dice one side shows the numbers 6,5,4 (success)
Example B: After stacking all 3 dice one side shows 3,2,1 (success)
Example C: After stacking all 3 dice no side shows a complete row of 3 numbers (fail)

Real knowledge: Beer bottles are often too thick and small. They don't break right. 750ml is the minimum. 1.5L is ideal.

BOTTLE	DICE OUTCOME	EFFECT
Beer	Your row is 3,2,1	Safety - 1
Wine	Your row is 5,4,3	No penalty.
Liquor	Your row is 6,5,4	You get +1 EFFECT on your throw later.

STEP 2: THE FUEL

You find gasoline, alcohol (from cleaning supplies), and diesel.

Task: Roll all 3 dice. You can reroll as many dice as you want up to 3 times (except if you have picked "Friend" at the beginning, then you can roll 4 times). You can at any time decide to stop and you can also reroll only individual dice. At the end you need to have at least 2 dice showing the same number that correlates with the fuel listed below.
Example A: You roll 1,2 and 3. You decide to keep the 3 and roll again. You roll 3,4. You have 3,3 (success)
Example B: You roll 1,5,6. You reroll all dice. You roll 5,5,6. You reroll all dice. You roll 5,6,6 (Diesel)
Real knowledge: Gasoline is standard. Alcohol burns cooler but works. Diesel is useless: its flashpoint is 64°C, it won't ignite from a rag. Gasoline's flashpoint is -43°C.

FUEL	DICE OUTCOME	EFFECT
Gasoline	1,1 or 2,2	+ 1 Visibility (it smells strong)
Alcohol	3,3 or 4,4	Normal roll. No penalty.
Diesel	5,5 or 6,6	Automatic Failure. You waste time.

STEP 3: THE WICK

You need something to light it. You have three options.

Task: Roll all 3 dice up to 3 times (except if you have picked "Friend" at the beginning, then you can roll 4 times). At the end your total needs to be 11 or higher.
Example: You roll 2,3,5. You keep the 5. You roll 3,1 and you keep the 3. You roll a 3. 5 + 3 + 3 = 11 (success)
Real knowledge: Rags work but you have to light them before throwing: it gives away your position. Storm matches (a Finnish invention) are safer. Chemical ignition ignites on impact but is dangerous to make.

WICK	DICE OUTCOME	EFFECT
Rag	11	+ 1 Visibility when you light it. Normal roll.
Storm matches	11	Normal roll. No penalty.
Chemical	13 or higher	You get +1 EFFECT on your throw. On a Failure, you lose 2 Safety instead of one (if ignites early).

STEP 4: THICKENER (Optional)

You've heard that adding something makes the fire stick and burn longer. This step takes extra time but makes your cocktail more effective.
Task: Roll all 3 dice. Add, divide, multiply or subtract any of the rolled numbers from one of the other numbers. You need to use all 3 dice. At the end you need to be able to reach the number 4 (chemistry is complex you know?)
Example A: You rolled 6,3,2. 6 divided by 3 is 2. 2 times 2 is 4. (success)
Example B: You rolled 5,4,3. 5 plus 3 is 8. 8 minus 4 is 4. (success)
Real knowledge: Styrofoam dissolved in gasoline creates a sticky gel (napalm). Motor oil helps it cling. Tar was used in the original Finnish cocktails. Sugar also works.
